

About Fish-X Project

The Fish-X Project is a project that focuses on technology, aims at digitalising small-scale fisheries, and embraces open-source principles. It has a duration of three years, from June 2023 to May 2025, and is co-funded by the Horizon Europe Programme. The project aims at developing a Fisheries Dataspace (Fish-X), an Insight Platform, and a Traceability Application to support the objectives of the EU Common Fisheries Policy (CFP), the EU Green Deal, and the EU Farm to Fork Strategy.

Timeline
June 2022 – May 2025

Target Group

- Small-scale & Recreational Fisheries

Budget

Total Volume 6€ MIO
